INTRODUCTION

This publication provides preliminary coverage data, Greenwich Mean Time of passes, correlation of photographic coverage with WAC chart areas, coverage plots, and preliminary data for Mission 1112-1, dated 18-27 November 1970 (GMT).

Plot sheets are arranged by geographic areas as indicated by the index tabs. Coverage of the Eurasian land mass is divided into days to eliminate illegible overprinting.

Plots for the forward and aft cameras are portrayed as stereoscopic and/or monoscopic passes. Stereo passes will be shown with the forward-looking camera frame numbers inside the pass outline and the corresponding aft-looking camera frame outside the pass outline. In the event of monoscopic coverage, only the frame numbers of the operative camera will appear. The relative location of photographs falling between the numbered frames may be approximated by interpolation.

All frames are indicated on the plot sheets, regardless of water coverage, total cloud cover, or a complete lack of imagery.

Vehicle Attitude: Normal

Image Quality:

- a. Main Cameras - The overall image quality of the fwd and aft cameras is good and comparable to the best of this system. Most imagery retains its edge sharpness at magnifications above 50 times. The aft camera image quality is slightly better than that of the fwd camera.
- b. Stellar and Index Cameras - The stellar and index cameras were operational throughout the mission. The imagery from both cameras is considered good.

Cloud Free Coverage: Approximately 85 percent of the entire mission is cloud free.
